IDEATION PHASE

Define the Problem Statements

Date: 28 October 2026	**Team ID:** Individual Project
Project Name: Health360_HealthCare_Analysis	**Maximum Marks:** 2 Marks

Customer Problem Statement Overview:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Customer Problem Statement Framework

Element	Guide Description	Healthcare Context Application
I am	Describe customer with 3-4 key characteristics - who are they?	Dr. Michael Carter (Clinical Risk Officer) / Emily Rodriguez (Data Analyst) / Dr. Priya Nair (Public Health Researcher)
I'm trying to	List their outcome or 'job' the care about - what are they trying to achieve?	Detect high-risk patients early, evaluate lifestyle impact on health, and design targeted preventive healthcare strategies
but	Describe what problems or barriers stand in the way - what bothers them most?	Identifying early-stage chronic conditions (Heart Disease, Diabetes, Stroke) and lifestyle correlations is difficult
because	Enter the 'root cause' of why the problem or barrier exists - what needs to be solved?	Manual analysis of large, complex healthcare datasets makes identifying hidden risk patterns and interactions slow and complex
which makes me feel	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Concerned about delayed clinical interventions, overwhelmed by complex data, and anxious about rising treatment costs and poor patient outcomes

Problem Statement (PS) Mapping Table

Problem	I am (Customer)	I'm trying to	But	Because	Which makes me

Statement (PS)					feel
PS-1	Dr. Michael Carter, a Clinical Risk Assessment Officer	Identify high-risk patients prone to chronic conditions (Heart Disease, Diabetes, Stroke) at an early stage	It is hard to detect disease patterns quickly and accurately	Manual analysis of patient clinical records (BMI, blood pressure, glucose, cholesterol) makes pattern detection slow	Concerned about delayed clinical interventions, severe patient health complications, and escalating treatment costs
PS-2	Emily Rodriguez, a Healthcare Data Analyst	Understand how lifestyle behaviors (smoking, alcohol, exercise, fatigue) influence chronic disease occurrence across patient groups	It is difficult to uncover clear correlations between lifestyle habits and health outcomes	Analyzing large healthcare datasets manually makes it complex to visualize multi-variable lifestyle interactions	Overwhelmed by data complexity and frustrated by the inability to deliver actionable insights for preventive care
PS-3	Dr. Priya Nair, a Public Health Researcher	Study population-wide disease patterns and identify major risk factors to design targeted public health policies and awareness programs	Understanding demographic variations and behavioral impacts across vulnerable population segments is complex	Without proper visualization tools, identifying vulnerable age groups and BMI risk categories is cumbersome	Anxious about inefficient healthcare resource allocation and missing key opportunities for community-wide disease prevention
