HEALTHCARE ANALYTICS CAPSTONE PROJECT

Final Communication & Execution Report

Date	28 October 2026
Team ID	Individual Project
Project Name	Health360_HealthCare_Analysis
Author / Analyst	Kriti Bhandari
Domain	Healthcare Analytics
Maximum Marks	1 Mark

1. Communication Plan

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle, including how updates, issues, and feedback were managed.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	Slack / MS Teams	Kriti Bhandari (Analyst / Lead)	Discuss daily data pipeline tasks, Snowflake staging progress, and sprint blockers.
2	Progress Update	Weekly	Email / Notion Dashboard	Data Engineering & Analytics Stakeholders	Share status on cohort data ingestion (N=5,000), schema validation, and Tableau visual design.
3	Issue / Bug Discussion	As Needed	Jira / GitHub Issues	Data Analyst & System	Address and resolve data quality issues,

				Administrator	such as missing biometrics (BMI, BP, Glucose) and duplicate records.
4	Stakeholder Review	Bi-Weekly	Zoom / Google Meet	Dr. Michael Carter, Emily Rodriguez, Dr. Priya Nair	Demonstrate interactive Tableau dashboards, collect feedback on KPI scorecards, and refine risk stratification metrics.
5	Final Demo Rehearsal	Once	Virtual Conference / Slide Deck	Project Sponsor, Lead Analyst & Clinical Stakeholders	Rehearse end-to-end data story flow from Snowflake ETL pipelines to 8-view Tableau visual story presentation.

2. Communication Challenges & Resolutions

S.No	Challenge Faced	Resolution / Action Taken
1	Alignment across disparate persona needs (Clinical Risk Officer vs. Healthcare Data Analyst vs. Public Health Researcher).	Designed persona-driven user stories (USN-1 to USN-11) and held bi-weekly stakeholder reviews to tailor specific visual views (Scatter plots for Clinicians, Heatmaps for Analysts, and Demographic Bins for Researchers).
2	Communicating complex multi-variable risk interactions (BP, Glucose, Smoking, BMI) to non-technical healthcare stakeholders.	Built an intuitive, interactive 8-view Tableau Visual Story ('Story 1') with self-explanatory tooltips, standardized color palettes (green for low risk, dark red/orange for high risk), and dynamic cross-filtering.
3	Data latency and schema discrepancies between raw EMR exports and Tableau reporting layers during sprint execution.	Established a standardized Snowflake pipeline (RAW -> STAGING -> CLEAN -> CURATED -> MART_CLINICAL_SUMMARY) with automated data audit scripts, reducing query latency to 45–120 ms and ensuring 100% calculation consistency.
